Annual Field Report

Introduction

This report describes the work of the field team during the year. It covers the planning, the visits to every site and the results of the environmental survey that was carried out in the spring and in the autumn.

The second paragraph is shorter and mentions the café where the team met.

Background

The main findings were:

- Water quality improved at most sites.
- Two sites need a second visit because the samples from the first visit were lost in transport.
- Costs stayed within the budget.

Method

Each visit followed the same steps:

1. Take three samples at the marked points.
2. Seal and label every sample on site.
3. Send the samples to the laboratory within a day.

Results

The table below lists the number of samples per region.

Region	Samples	Passed
North	120	112
South	98	90
East	75	75

All regions met the target of ninety percent.

Discussion

Alpha one: the left column starts here and continues for a few lines of text in a narrow block. Alpha two: it ends before the right column begins.

Beta one: the right column is read after the left column has ended, from top to bottom. Beta two: this is the last line of the page body.
